

**Sprint 3 Plan**  
**Spotify Match, Team rocket, 2/16/2023**

**Goal:**

**User stories:**

- As a person, I would like to navigate from one screen to another. Eg- after logging in to the app I would like to go to the survey page if I am not an existing user of the app.
  - **Tasks:**
    - Merging pages / views together (5 story points)
    - Sending data from the Spotify login page to the server (5 story points)
    - Create models and connect to backend ( 8 Story Points)
- As a person,I would like to have potential matches based on my spotify music interests
  - **Tasks:**
    - Using the Spotify API to get all the required data for compatibility (5 story points)
    - Adding / Changing tables to the database and other required backend tasks (5 story points)
- As a person, I would like to easily swipe through the user cards on the homepage
  - **Tasks:**
    - User cards with swiping feature (5 story points)

**Team Roles:**

- Rami - Create models and connect to backend
- Amaan - Merging pages / views together along with additional backend tasks
- Amandeep - User cards with swiping feature
- Vani - Sending data from the Spotify login page to the server
- Mrin - Using the Spotify API to get all the required data for compatibility
- Calder -Adding / Changing tables to the database and other required backend tasks

**Initial Task Assignment**

- Rami -
  - User Story: As a person, I would like to navigate from one screen to another. Eg- after logging in to the app I would like to go to the survey page if I am not an existing user of the app.
  - Task: Create models and connect to the backend.
- Amaan -
  - User Story: As a person, I would like to navigate from one screen to another. Eg- after logging in to the app I would like to go to the survey page if I am not an existing user of the app.
  - Task: Merging pages / views together.
- Amandeep -

- User Story: As a person, I would like to easily swipe through the user cards on the homepage
  - Task: Make user cards swipeable on the home page.
- Vani -
  - User Story: As a person, I would like to navigate from one screen to another. Eg- after logging in to the app I would like to go to the survey page if I am not an existing user of the app.
  - Task: Sending data from the Spotify login page to the server
- Mrin -
  - User Story: As a person, I would like to have potential matches based on my spotify music interests
  - Task: Using the Spotify API to get all the required data for compatibility
- Calder -
  - User Story: As a person, I would like to have potential matches based on my spotify music interests
  - Task: Adding / Changing tables to the database and other required backend tasks
